## BENTONITE FOR LIVESTOCK, POULTRY, AND AQUATIC FEED

## BENTONITE FOR LIVESTOCK, POULTRY, AND AQUATIC FEED

Bentonite is a natural clay mineral with excellent absorbent and functional properties, typically beige to white in color. It is widely used in animal nutrition due to its ability to prevent digestive disorders and reduce the effects of toxins and pathogens in the gastrointestinal tract.

Thanks to its strong adsorption capacity, bentonite binds harmful substances such as mycotoxins, heavy metals, and other contaminants in feed. This reduces the risk of poisoning, improves nutrient absorption, and supports gut health, thereby enhancing animal performance and productivity.

## **Product Specifications**

Туре	Available in both Calcium and Sodium Bentonite
Water absorption capacity (based on dry weight)	300% - 500%
Purity	100% natural and free from contaminants
Montmorillonite Content	70%- 75%
Mycotoxin and Heavy Metal Binding	Proven and tested
Ability	
Compliance	Laboratory-tested and certified by veterinary
	authorities

## Advantages of Bentonite in Livestock, Poultry, and Aquatic Feed:

- . Enhances feed efficiency and digestibility
- . Supports gut health by improving intestinal barrier function
- . Helps regulate pH levels in the digestive tract
- . Binds mycotoxins, heavy metals, and harmful substances
- . Reduces the risk of digestive disorders and diarrhea
- . Improves weight gain and feed conversion ratio
- . Enhances immunity and animal health
- . Promotes better egg and meat quality
- . Improves litter condition and reduces moisture in poultry farms
- . Stabilizes feed pellets and improves physical properties
- . Enhances carcass quality in aquaculture
- . Reduces odor emissions from manure
- . Safe for use in pet food as an anti-caking and detoxifying agent
- . Cost-effective and widely used in feed manufacturing
